

# Proposed changes to buses in central London

Executive summary  
April 2017

## **Executive summary**

We recently reviewed a number of bus routes into the West End and adjacent areas. A set of proposals was identified for 23 of the routes.

The proposals were drawn up on a network basis and involve a combination of changing where some routes terminate, rerouting some away from Oxford Street and extending others to maintain connections.

Our consultation was held between 25 November and 29 January setting out proposals for people to comment on. We received 3,415 responses.

This document explains the processes, responses and outcomes of the consultation. Many of the route proposals are connected and we have presented the information in this document in the same groupings that we used in the consultation. .

### **Key themes and responses**

We asked people if they used the specific bus services being consulted on and have identified users and non-users.

Overall, approximately 20 per cent of respondents were users of the routes concerned.

A number of key themes emerged from the consultation.

- Support for the way in which the review would complement wider initiatives such as the transformation of Oxford Street
- Concern about the loss of direct bus links (for example to and from Victoria), the need to interchange, and risks of overcrowding on bus and Tube services
- Concern about the impact on the more vulnerable users for example those with mobility impairments

Detailed analysis of the results can be found from page 16 onwards of the main report. Tables A and B below summarise the responses:

- Table A shows the proportions of support and opposition for each route proposal amongst all 3415 respondents to the consultation
- Table B shows for each route the numbers of route users and non-users responding and their respective levels of support

**Table A – Summary results (proportion of all 3415 respondents)**

| % of respondents | 23%   | 27%               | 49%       |  |            |

Note \*1 – Per cent of user / non-user from the total consultation response of 3415

Note \*2 – Support / strong support; full breakdown available in route specific tables

## **Conclusion**

A total of 3415 responses were received. A further review of the proposals and when they should be introduced, in-light of the comments received, has been undertaken.

We intend to go ahead with the proposals as put forward in the consultation except for the proposal to change route 23 at its western end (diversion to Wembley) and the associated change to route 452, which will be considered further in conjunction with stakeholders.

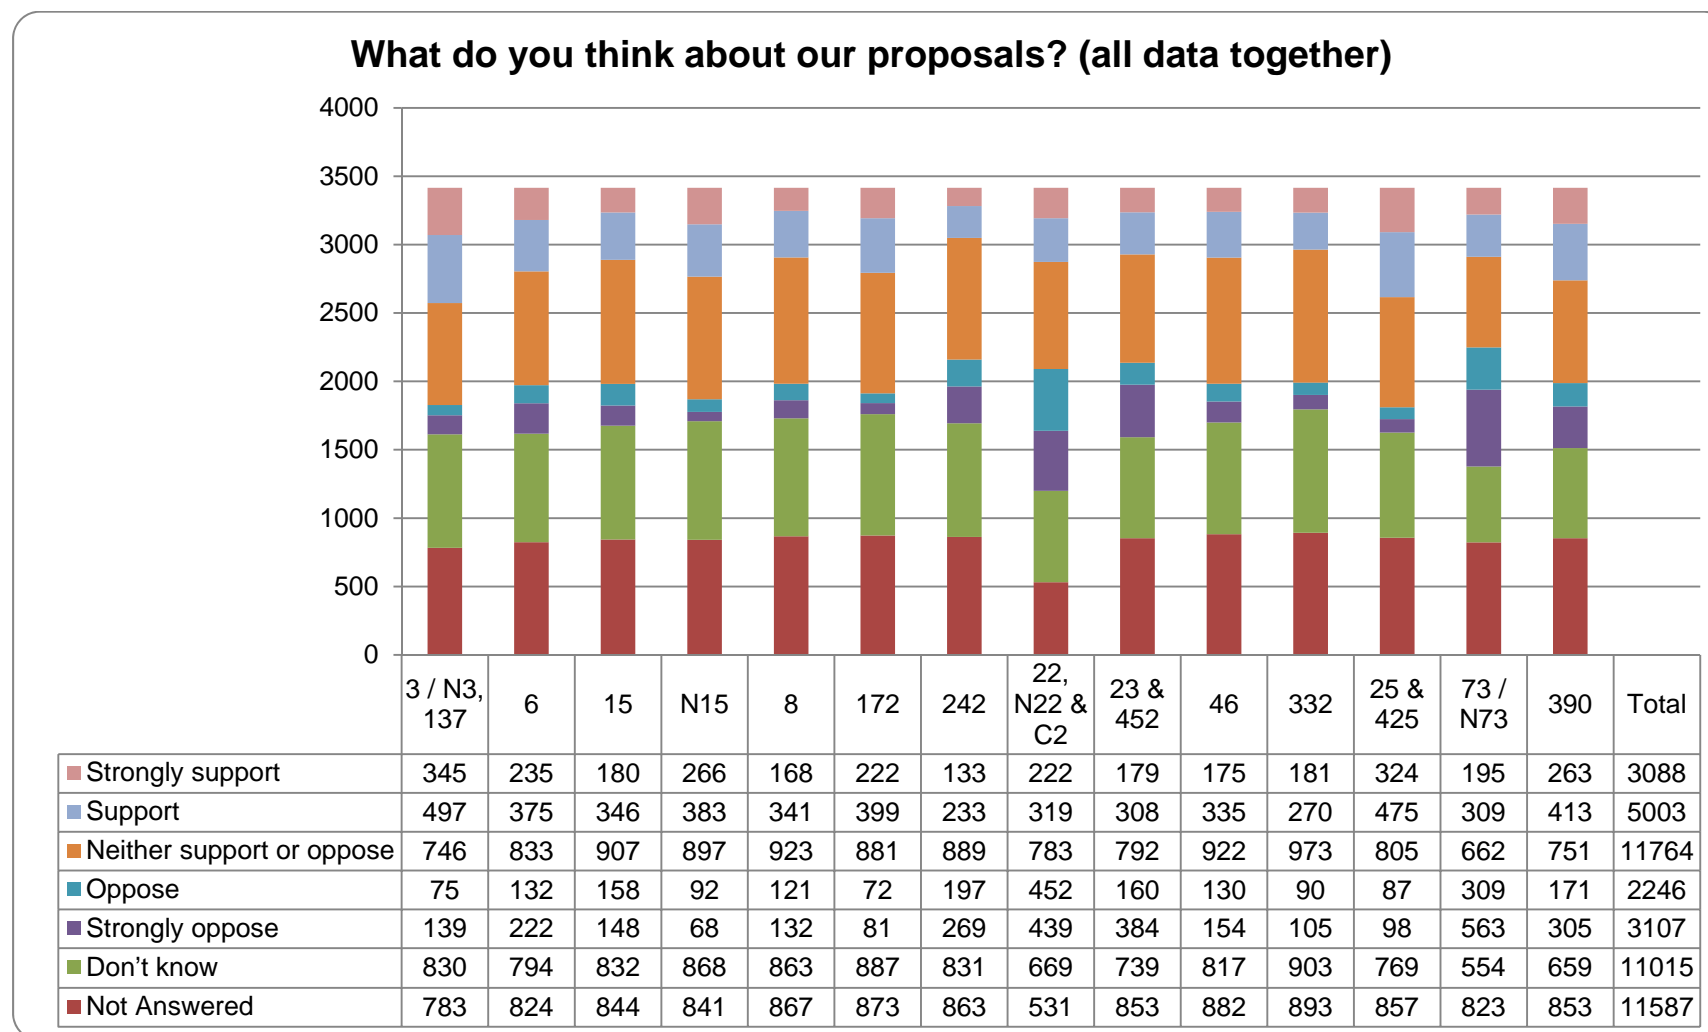

## **Implementation**

We intend to start introducing changes from summer 2017. This is generally earlier than originally proposed because the overall level of demand on these routes is now appreciably lower than had been anticipated by this stage.

Detailed implementation dates are being reviewed. We are also looking at how the resource saved could be used on other parts of the bus network.

Once introduced we will closely monitor travel patterns, demand and reliability.

**Table B**

There was a total of 3415 responses to each routes question.
